Write-up

Hidden objects in images

1. Write-up

TL: DR

We have downloaded a JPG file containing a secret message. The steps to solve this puzzle are included in the table below.

	Step	Output
	Play with colours and noise levels	Got a random text what could it be?
	Try text export with tool – no password	Nothing
	Try text export with tool – with password	Retrieved the flag!

What do we have

In this challenge we will have a ZIP file which contains a picture. Our goal is to retrieve a flag somewhere.

 DontPanic_FortyTwo.jpg	104 KB	JPEG image	Today at 14:54
 DontPanic_FortyTwo.zip	97 KB	ZIP archive	Today at 14:54

2. Step 1

There are multiple ways to do a colour change on the picture. For example, the inbuilt colour adjuster of your image viewer or a tool that searches for any noise in the colours.

In our option a tool is the best option. I used the online tool: <https://incoherency.co.uk/image-steganography>

SPOILER:

Image:

DontPanic_FortyTwo.jpg

Example:

Hidden bits: 1

3. Step 2

In this step we need to use a special tool, that searches for the secret text or files.

As we process it with the tool: <https://futureboy.us/stegano/decinput.html>.

We see nothing in the output so it couldn't find anything without a password given.

SPOILER:

This form decodes the payload that was hidden in a JPEG image

Select a JPEG, WAV, or AU file to decode:

DontPanic_FortyTwo.jpg

Password (may be blank):

View raw output as MIME-type

Guess the payload

Prompt to save (you must guess the file type yourself.)

Error. This file may not contain steganographic data, or you may have specified an incorrect password.

4. Step 3

When you use the tool with the password. You get a different output. Now you can see the flag that was hidden.

SPOILER:

Select a JPEG, WAV, or AU file to decode:

DontPanic_FortyTwo.jpg

Password (may be blank):

Y0uMa

View raw output as MIME-type

Guess the payload

Prompt to save (you must guess the file type yourself.)

Congrats, you found the flag!
